Glossary

- Entries printed in red are IB command terms.
- Entries are *aides-mémoire*, rather than formal definitions.

Α

- **abiotic factor** a non-biological factor (e.g. temperature) that is part of the environment of an organism
- **abscisic acid** a plant growth substance tending to inhibit growth
- **absorption spectrum** range of a pigment's ability to absorb various wavelengths of light
- acetylcholine a neurotransmitter, liberated at synapses in the CNS
- acid rain the cocktail of chemical pollutants that may occur in the atmosphere
- action potential rapid change (depolarization) in membrane potential of an excitable cell (e.g. a neuron)
- action spectrum range of wavelengths of light within which a process like photosynthesis takes place
- **activation energy** energy required by a substrate molecule before it can undergo a chemical change
- active site region of enzyme molecule where substrate molecule binds
- **active transport** movement of substances across a membrane involving a carrier protein and energy from respiration
- adenine a purine organic base, found in the coenzymes ATP and NADP, and in nucleic acids (DNA and RNA) in which it pairs with thymine
- adenosine diphosphate (ADP) a nucleotide, present in every living cell, made of adenosine and two phosphate groups linked in series, and important in energy transfer reactions of metabolism
- adenosine triphosphate (ATP) a nucleotide, present in every living cell, formed in photosynthesis and respiration from ADP and P_i, and functioning in metabolism as a common intermediate between energy-requiring and energy-yielding reactions
- adrenaline (also called epinephrine) a hormone secreted by the adrenal medulla (and a neurotransmitter secreted by nerve endings of the sympathetic nervous system), having many effects, including speeding of heartbeat, and the breakdown of glycogen to glucose in muscle and liver
- **aerobic respiration** respiration requiring oxygen, involving oxidation of glucose to carbon dioxide and water
- alimentary canal the gut; a tube running from mouth to anus in vertebrates, where complex food substances are digested and the products of digestion selectively absorbed into the body
- allele an alternative form of a gene, occupying a specific locus on a chromosome

- **allele frequency** the commonness of the occurrence of any particular allele in a population
- **alpha cell (pancreas)** glucagon-secreting cell of the islets of Langerhans in the pancreas
- alveolus air sac in the lung
- **amino acid** building block of proteins, of general formula R.CH(NH₂).COOH
- **amphipathic** having hydrophobic and hydrophilic parts on the same molecule
- **anabolism** the building up of complex molecules from smaller ones
- anaerobic respiration respiration in the absence of oxygen, involving breakdown of glucose to lactic acid or ethanol
- **analogous structure** similar in structure but of different evolutionary origin
- analyse break down in order to bring out the essential elements or structure
- anion negatively charged ion
- annotate add brief notes to a diagram or graph
- anther part of the stamen in flowers, consisting of pollen sacs enclosed in walls that eventually split open, releasing pollen
- antibiotics organic compounds produced by some microorganisms which selectively inhibit or kill other microorganisms
- antibody a protein produced by blood plasma cells derived from B lymphocytes when in the presence of a specific antigen, which then binds with the antigen, aiding its destruction
- anticodon three consecutive bases in tRNA, complementary to a codon on RNA
- antidiuretic hormone (ADH) hormone secreted by the pituitary gland that controls the permeability of the walls of the collecting ducts of the kidney
- antigen a substance capable of binding specifically to an antibody
- apoplast collective name for the cell walls of a tissue or plant
- aquaporin a water channel pore (protein) in a membrane aqueous humour fluid between lens and cornea of the eye arteriole a very small artery
- **artificial classification** classifying organisms on the basis of few, self-evident features
- **artificial selection** selection in breeding exercises, carried out deliberately, by humans
- **asexual reproduction** reproduction not involving gametes and fertilization
- **assimilation** uptake of nutrients into cells and tissues **atherosclerosis** deposition of plaque (cholesterol derivative) on inner wall of blood vessels
- atrioventricular node mass of tissue in the wall of the right atrium, functionally part of the pacemaker mechanism

atrioventricular valve tricuspid or bicuspid valve atrium (plural, atria) one of the two upper chambers of the mammalian four-chambered heart

autolysis self-digestion

autonomic the involuntary nervous system

autotrophic (organism) self-feeding – able to make its own elaborated foods from simpler substances

auxin plant growth substance, indoleacetic acid axon fibre carrying impulses away from the cell body of a neuron

В

bacillus a rod-shaped bacterium

bacteriophage a virus that parasitizes bacteria (also known as a phage)

baroreceptor a sensory receptor responding to stretch, in the walls of blood vessels

basement membrane the thin fibrous layer separating an epithelium from underlying tissues

beta cell (pancreas) insulin-secreting cells of the islets of Langerhans in the pancreas

bicuspid valve valve between atrium and ventricle on the left side of the mammalian heart

bile an alkaline secretion of liver cells which collects in the gall bladder in humans, and which is discharged into the duodenum periodically

binary fission when a cell divides into two daughter cells, typically in reproduction of prokaryotes

binomial system double names for organisms, in Latin, the generic preceding the specific name

bioinformatics interdisciplinary science of storage, retrieval, organization and analysis of biological data biomass total mass of living organisms in a given area (e.g. a quadrat)

biome a major life-zone over an area of the Earth, characterized by the dominant plant life present

bioremediation waste management techniques that involve the use of organisms to neutralize pollutants at contaminated sites

biosphere the inhabited part of the Earth

biotechnology the industrial and commercial applications of biology, particularly of microorganisms, enzymology and genetic engineering

biotic factor the influence of living things on the environment of other living things

bivalent a pair of duplicated chromosomes, held together by chiasmata during meiosis

blastocyst embryo as hollow ball of cells, at the stage of implantation

blind spot region of the retina where the optic nerve leaves body mass index (BMI) body mass in kg/(height in m)² bone marrow tissue special connective tissue filling the cavity of certain bones

boreal forest northern coniferous forests (example of a biome) brain the coordinating centre of the nervous system breed (animal) the animal equivalent of a plant variety

bronchiole small terminal branch of a bronchus bronchus a tube connecting the trachea with the lungs brush border tiny, finger-like projections (microvilli) on the surface of epithelial cells of the small intestine buffer a solution which minimizes change in pH when acid or alkali are added

bundle of His bundles of long muscle fibres that transmit myogenic excitation throughout the ventricle walls

C

C₃ pathway the light-independent reaction in photosynthesis, producing as its first product a 3-carbon compound, glycerate 3-phosphate

calculate obtain a numerical answer showing the relevant stages in the working (unless instructed not to do so)

Calvin cycle a cycle of reactions in the stroma of the chloroplast by which some of the product of the dark reaction is reformed as the acceptor molecule for carbon dioxide (ribulose biphosphate)

carcinogen any substance or radiation directly involved in causing cancer

cardiac cycle the stages of the heartbeat, by which the atrial and then the ventricular walls alternately contract (systole) and relax (diastole)

carnivore flesh-eating animal

carrier an individual that has one copy of a recessive allele that causes a genetic disease in individuals that are homozygous for this allele

carrier protein one of the types of protein in plasma membranes, responsible for active transport across the membranes

cartilage firm but plastic skeletal material (e.g. cartilage over bones at joints)

Casparian strip band of cells with impervious walls, found in plant roots

catabolism the breaking down of complex molecules in the biochemistry of cells

catalyst a substance that alters the rate of a chemical reaction, but remains unchanged at the end

cellular respiration controlled release (transfer) of energy from organic compounds in cells to form ATP

cellulase enzyme capable of hydrolysing cellulose **cellulose** an unbranched polymer of 2000–3000 glucose residues, the major ingredient of most plant walls

central dogma the idea that transfer of genetic information from DNA of the chromosome to mRNA to protein (amino acid sequence) is irreversible

centromere constriction of the chromosome, the region that becomes attached to the spindle fibres in division centrosome organelle situated near the nucleus in animal cells, involved in the formation of the spindle prior to nuclear division

cephalization development of a head at the anterior of an animal

cerebellum part of hindbrain, concerned with muscle tone, posture and movement

- **cerebral cortex** superficial layer of grey matter on extension of forebrain, much enlarged in humans and other apes
- cerebral hemispheres (cerebrum) the bulk of the human brain, formed during development by the outgrowth of part of the forebrain, consisting of densely packed neurons and myelinated nerve fibres
- chemiosmosis movement of ions down an electrochemical gradient, linked to the generation of ATP
- **chemoautotroph** an organism that uses energy from chemical reactions to generate ATP and produce organic compounds from inorganic substances
- chemoheterotroph an organism that uses energy from chemical reactions to generate ATP and obtains organic compounds from other organisms
- chemoreceptor a sense organ receiving chemical stimuli chemosynthesis use of chemical energy from oxidation of inorganic compounds to synthesize organic compounds, typically from carbon dioxide and water
- **chiasma** (plural, **chiasmata**) site of crossing over (exchange) of segments of DNA between homologous chromosomes
- chlorophyll the main photosynthetic pigment of green plants, occurs in the grana membranes (thylakoid membranes) of the chloroplasts
- **chloroplast** organelle that is the site of photosynthesis and contains chlorophyll
- cholesterol a lipid of animal plasma membranes; a precursor of the steroid hormones, in humans, formed in the liver and transported in the blood as lipoprotein
- choroid layer of blood vessels lying below the retina chromatid one of two copies of a chromosome after it has replicated
- chromatin a nuclear protein material in the nucleus of eukaryotic cells at interphase; forms into chromosomes during mitosis and meiosis
- chromosome visible in appropriately stained cells at nuclear division, each chromosome consists of a long thread of DNA packaged with protein; chromosomes replicate prior to division, into chromatids. Contents of nucleus appears as granular chromatin between divisions
- chyme partly digested food as it leaves the stomach cilium (plural, cilia) motile, hair-like outgrowth from surface of certain eukaryotic cells
- citric acid cycle see Krebs cycle
- clade the branch of a phylogenetic tree containing the set of all organisms descended from a particular common ancestor which is not an ancestor of any non-member of the group
- cladistics method of classifying living organisms that makes use of lines of descent only (rather than phenotypic similarities)
- **climax community** the mature (stable) stage of a succession of communities
- **clone** a group of genetically identical individuals (or cells) **CNS** see *nervous system*
- **codominant alleles** pairs of alleles that both affect the phenotype when present in a heterozygous state

- **codon** three consecutive bases in DNA (or RNA) which specify an amino acid
- **coleoptile** protective sheath around emerging leaves of germinating grass seeds
- colon part of the gut, preceding the rectum
- **colostrum** first milk secreted by the mother, after birth of young
- **commensalism** a mutually beneficial association between two organism of different species
- comment give a judgment based on a given statement or result of a calculation
- **community** a group of populations of organisms living and interacting with each other in a habitat
- compare give an account of similarities between two (or more) items or situations, referring to both (all) of them throughout
- compare and contrast give an account of similarities and differences between two (or more) items or situations, referring to both (all) of them throughout
- **compensation point** the point where respiration and photosynthesis are balanced
- condensation reaction formation of larger molecules involving the removal of water from smaller component molecules
- **cone (retinal cell)** a light-sensitive cell in the retina, responsible for colour vision
- conjugate protein protein combined with a non-protein part connective tissue tissues that support and bind tissues together
- conservation applying the principles of ecology to manage the environment
- contractile vacuole a small vesicle in the cytoplasm of many fresh water protozoa that expels excess water
- construct display information in a diagrammatic or logical form
- cornea transparent covering at the front of the eye corpus luteum glandular mass that develops from an ovarian follicle in mammals, after the ovum is discharged cotyledon the first leaf (leaves) of a seed plant, found in the embryo
- covalent bond bond between atoms in which electrons are shared
- cristae folds in the inner membrane of mitochondria crossing over exchange of genetic material between homologous chromosomes during meiosis
- **crypt of Lieberkühn** endocrine cells within the pancreas **cuticle** layer of waxy material on outer wall of epidermis **cyanobacteria** photosynthetic prokaryotes
- cytokinesis division of cytoplasm after nucleus has divided into two
- cytology study of cell structure
- **cytoplasm** living part of the cell bound by the plasma membrane, excluding the nucleus
- cytosol what remains of cytoplasm when the organelles have been removed

D

data recorded products of observations and measurements qualitative data observations not involving measurements

quantitative data precise observations involving measurements

deamination the removal of NH₂ from an amino acid decomposer organisms (typically microorganisms) that feed on dead plant and animal material, causing matter to be recycled by other living things

deduce reach a conclusion from the information given **define** give the precise meaning of a word, phrase, concept or physical quantity

degenerate code the triplet code contains more codons than there are amino acids to be coded, so most amino acids are coded for by more than one codon

denaturation a structural change in a protein that results in a loss (usually permanent) of its biological properties

dendrite a fine fibrous process on a neuron that receives impulses from other neurons

depolarization (of axon) a temporary and local reversal of the resting potential difference of the membrane that occurs when an impulse is transmitted along the axon

describe give a detailed account

desertification the conversion of marginal cultivated land into desert, caused by climate change or by over-grazing or inferior cultivation

design produce a plan, simulation or model determine obtain the only possible answer

detrital chain a food chain based on dead plant matter detritivore an organism that feeds on detritus (dead organic matter)

dialysis separation of large and small molecules in solution by the inability of the former to pass through a selectively permeable membrane

diaphragm a sheet of tissues, largely muscle, separating thorax from abdomen in mammals

diastole relaxation phase in the cardiac cycle

dichotomous key one in which a group of organisms is progressively divided into two groups of smaller size

dicotyledon class of Angiospermophyta having an embryo with two seed leaves (cotyledons)

diffusion passive movement of particles from a region of high concentration to a region of low concentration

dihybrid cross one in which the inheritance of two pairs of contrasting characters (controlled by genes on separate chromosomes) is observed

diploid condition organisms whose cells have nuclei containing two sets of chromosomes

disaccharide a sugar that is a condensation product of two monosaccharides (e.g. maltose)

discuss offer a considered and balanced review that includes a range of arguments, factors or hypotheses.

Opinions or conclusions should be presented clearly and supported by appropriate evidence

distinguish make clear the differences between two or more concepts or items

disulfide bond S—S bond between two S-containing amino acid residues in a polypeptide or protein chain

diuresis increased secretion of urine

division of labour the carrying out of specialized functions by different types of cell in a multicellular organism

DNA a form of nucleic acid found in the nucleus, consisting of two complementary chains of deoxyribonucleotide subunits, and containing the bases adenine, thymine, guanine and cytosine

dominant allele an allele that has the same effect on the phenotype whether it is present in the homozygous or heterozygous state

double bond a covalent bond involving the sharing of two pairs of electrons (rather than one)

double circulation in which the blood passes twice through the heart (pulmonary circulation, then systemic circulation) in any one complete circuit of the body

double fertilization a feature of flowering plants in which two male nuclei enter the embryo sac, and one fuses with the egg cell and one with the endosperm nucleus

draw represent by means of a labelled, accurate diagram or graph, using a pencil. A ruler (straight edge) should be used for straight lines. Diagrams should be drawn to scale. Graphs should have points correctly plotted (if appropriate) and joined in a straight line or smooth curve

duodenum the first part of the intestine after the stomach $\boldsymbol{\mathsf{F}}$

ecology the study of relationships between living organisms and between organisms and their environment – a community and its abiotic environment

ecosystem a natural unit of living (biotic) components and non-living (abiotic) components (e.g. temperate deciduous forest)

edaphic factor factor influenced by the soil effector an organ or cell that responds to a stimulus by doing something (e.g. a muscle contracting, a gland

egestion disposal of waste from the body (e.g. defecation) **egg cell** an alternative names for an ovum

electron microscope (EM) microscope in which a beam of electrons replaces light, and the powers of magnification and resolution are correspondingly much greater

electron-transport system carriers that transfer electrons along a redox chain, permitting ATP to be synthesized in the process

embolism a blood clot blocking a blood vessel embryo the earliest stages in development of a new animal or plant, from a fertilized ovum, entirely dependent on nutrients supplied by the parent embryo sac occurs in the ovule of flowering plants, and contains the egg cell and endosperm nucleus
 emulsify to break fats and oils into very tiny droplets
 endemic species restricted to a particular region
 endergonic reaction metabolic reaction requiring energy input

endocrine glands the hormone-producing glands that release secretions directly into the body fluids

endocytosis uptake of fluid or tiny particles into vacuoles in the cytoplasm, carried out at the plasma membrane
 endoplasmic reticulum system of branching membranes in the cytoplasm of eukaryotic cells, existing as rough ER (with ribosomes) or as smooth ER (without ribosomes)
 endoskeleton an internal skeleton system

endosperm the stored food reserves within the seeds of
flowering plants

endothelium a single layer of cells lining blood vessels and other fluid-filled cavities

endothermic generation of body heat metabolically enzyme mainly proteins (a very few are RNA) that function as biological catalysts

epidemiology the study of the occurrence, distribution and control of disease

epidermis outer layer(s) of cells

epigenetics study of heritable changes in gene activity not caused by changes in DNA

epiglottis flap of cartilage that closes off the trachea when food is swallowed

epiphyte plant living on the surface of other plants epithelium sheet of cells bound strongly together, covering internal or external surfaces of multicellular organisms epitope part of an antigen that is recognized by the immune system

erythrocyte red blood cell

estimate obtain an approximate value

estrous period of fertility (immediately after ovulation) during the estrous cycle

estrous cycle reproductive cycle in female mammal in the absence of pregnancy

etiolation the condition of plants when grown in the dark eukaryotic (cells) cells with a 'good nucleus' (e.g. animal, plant, fungi and protoctista cells)

evaluate make an appraisal by weighing up the strengths and limitations

evolution cumulative change in the heritable characteristics of a population

ex situ not in its original or natural position or habitat excretion removal from the body of the waste products of metabolic pathways

exergonic reaction metabolic reaction releasing energy exocrine gland gland whose secretion is released via a duct exocytosis secretion of liquids and suspensions of very fine particles across the membrane of eukaryotic cells

exoskeleton skeleton secreted external to the epidermis of the body

exothermic chemical reaction that releases energy as heat (an endothermic reaction requires heat energy) expiratory emitting air during breathing

explain give a detailed account including reasons or causes extensor muscle a muscle that extends or straightens a limb

F

F₁ **generation** first filial generation – arises by crossing parents (P) and, when selfed or crossed via sibling crosses, produces the F₂ generation

facilitated diffusion diffusion across a membrane facilitated by molecules in the membrane (without the expenditure of metabolic energy)

fermentation anaerobic breakdown of glucose, with endproducts ethanol and carbon dioxide or lactic acid

fertilization the fusion of male and female gametes to form a zygote

fetus a mammalian embryo when it becomes recognizable (e.g. the human embryo from 7 weeks after fertilization)

field layer the layer of herbaceous plants in a forest or wood

filter-feeding feeding on tiny organisms which are strained from the surrounding medium

fimbria (singular, **fimbrium**) thin, short filaments protruding from some bacteria, involved in attachment

flaccid state of a tissue with insufficient water, as in wilting leaves

flagellum (plural, flagella) a long thin structure, occurring singly or in groups on some cells and tissues, and used to propel unicellular organisms, and to move liquids past anchored cells (flagella of prokaryotes and eukaryotes are of different internal structure)

flexor muscle a muscle that on contraction bends a limb (or part of a limb)

flower develops from the tip of a shoot, with outer parts (e.g. sepals, petals) surrounding the male and female reproductive organs

fluid mosaic model the accepted view of the structure of the plasma membrane, comprising a phospholipid bilayer with proteins embedded but free to move about

food chain a sequence of organisms within a habitat in which each is the food of the next, starting with a producer, which is photosynthetic

food web interconnected food chains

founder effect genetic differences that develop between an original breeding population and a small isolated interbreeding group of these organisms

fovea point on a retina of greatest acuity of vision free energy part of the potential chemical energy in molecules that is available to do useful work when the molecules are broken

freeze etching preparation of specimens for electron microscope examination by freezing, fracturing along natural structural lines and preparing a replica frequency commonness of an occurrence **fruit** forms from the ovary after fertilization, as the ovules develop into seeds

functional group the chemically active part of a member of a series of organic molecules

fungus heterotrophic, non-motile, multicellular (usually) eukaryotic organism with 'plant' body – a mycelium of hyphae with cell walls of chitin; the fungi constitute a separate kingdom

G

gall bladder sac beside the liver that stores bile, present in some mammals (e.g. humans)

gamete sex cell (e.g. ovum, sperm)

ganglion part of a nervous system, consisting of nerve cell bodies

gaseous exchange exchange of respiratory gases (oxygen, carbon dioxide) between cells/organism and the environment

gastric relating to the stomach

gene a heritable factor that controls a specific characteristic

gene mutation change in the chemical structure (base sequence) of a gene resulting in change in the characteristics of an organism or individual cell

gene pool all the genes (and their alleles) present in a breeding population

gene probe an artificially prepared sequence of DNA made radioactive with ¹⁴C, coding for a particular amino acid residue sequence

gene therapy various mechanisms by which corrected copies of genes are introduced into a patient with a genetic disease

generator potential localized depolarization of a membrane of a sensory cell

genetic code the order of bases in DNA (of a chromosome) that determines the sequence of amino acids in a protein

genetic counselling genetic advice to potential parents on the risks of having children with an inherited disease

genetic engineering change to the genetic constitution of individuals or populations by artificial selection

genome the whole of the genetic information of an organism

genotype the genetic constitution of an organism – the alleles of an organism

genus a group of similar and closely related species **germination** the resumption of growth by an embryonic plant in seed or fruit, at the expense of stored food **gland** cells or tissues adapted for secretion

global warming the hypothesis that the world climate is warming due to rising levels of atmospheric carbon dioxide, a greenhouse gas

glomerulus network of capillaries which are surrounded by the renal capsule

glycocalyx long carbohydrate molecules attached to membrane proteins and membrane lipids

glycogen a much-branched polymer of glucose, the storage carbohydrate of many animals

glycogenesis the synthesis of glycogen from glucose (the reverse is glycogenolysis)

glycolysis the first stage of tissue respiration in which glucose is broken down to pyruvic acid, without use of oxygen

glycoprotein membrane protein with a glycocalyx attached glycosidic bond a type of chemical linkage between monosaccharide residues in polysaccharides

goblet cell mucus-secreting cell of an epithelium

Golgi apparatus a stack of flattened membranes in the cytoplasm, the site of synthesis of biochemicals

gonad an organ in which gametes are formed gonadotrophic hormone follicle-stimulating hormone (FSH) and luteinizing hormone (LH), secreted by the

anterior pituitary, which stimulate gonad function granum (plural, grana) stacked discs of membranes found within the chloroplast, containing the photosynthetic pigments, and the site of the light-dependent reaction of photosynthesis

grey matter regions of the brain and spinal cord consisting largely of nerve cell bodies

growth more or less irreversible increase in size and amount of dry matter

gut the alimentary canal

Н

habitat the locality or surroundings in which an organism normally lives or the location of a living organism

halophyte a plant adapted to survive at abnormally high salt levels (e.g. seashore or salt marsh plant)

haploid (cells) cells having one set of chromosomes, the basic set

heart rate number of contractions of the heart per minute helicase an enzyme that unwinds the DNA double helix hemoglobin a conjugated protein, found in red cells, effective at carrying oxygen from regions of high partial pressure (e.g. lungs) to regions of low partial pressure of oxygen (e.g. respiring tissues)

hepatic associated with the liver

herb layer layer of herbaceous plants (mainly perennials) growing in woodland

herbaceous non-woody

herbicide pesticide toxic to plants

herbivore an animal that feeds (holozoically) exclusively on plants

hermaphrodite organism with both male and female reproductive systems

heterotroph an organism incapable of synthesizing its own elaborated nutrients

heterozygous having two different alleles of a gene hexose a monosaccharide containing six carbon atoms (e.g. glucose, fructose)

hibernation passing the unfavourable season in a resting state of sleep

histology the study of the structure of tissues histone basic proteins (rich in the amino acids arginine and lysine) that form the scaffolding of chromosomes holozoic ingesting complex food material and digesting it homeostasis maintenance of a constant internal environment

homeotherm organism that maintains a constant body temperature

homologous chromosomes chromosomes in a diploid cell which contain the same sequence of genes, but are derived from different parents

homologous structures similar due to common ancestry homozygous having two identical alleles of a gene hormone a substance, formed by an endocrine gland and transported in the blood all over the body, but triggering a specific physiological response in one type of organ or tissue

host an organism in or on which a parasite spends all or part of its lifecycle

humus complex organic matter, the end-product of the breakdown of the remains of plants and animals, which covers the mineral particles of soil

hybrid an individual produced from a cross between two genetically unlike parents

hybridoma an artificially produced hybrid cell culture, used to produce monoclonal antibodies

hydrocarbon chain a linear arrangement of carbon atoms combined together and with hydrogen atoms, forming a hydrophobic tail to many large organic molecules

hydrogen bond a weak bond caused by electrostatic attraction between a positively charged part of one molecule and a negatively charged part of another

hydrolysis a reaction in which hydrogen and hydroxide ions from water are added to a large molecule causing it to split into smaller molecules

hydrophilic water loving

hydrophobic water hating

hydrophyte an aquatic plant

hydrosere a plant succession that originated from open water

hydrostatic pressure mechanical pressure exerted on or by liquid (e.g. water) also known as pressure potential hyperglycemia excess glucose in the blood

hypertonic solution a more concentrated solution (one with a less negative water potential) than the cell

solution

hypha the tubular filament 'plant' body of a fungus, which
in certain species is divided by cross walls into either
multicellular or unicellular compartments

hypoglycemia very low levels of blood glucose hypothalamus part of floor of the rear of the forebrain, a control centre for the autonomic nervous system, and source of releasing factors for pituitary hormones

hypothesis a tentative (and testable) explanation of an observed phenomenon or event

hypotonic solution a less concentrated solution (one with a more negative water potential) than the cell solution

L

identify provide an answer from a number of possibilities

immunity resistance to the onset of a disease after infection by the causative agent active immunity immunity due to the production of antibodies by the organism itself after the body's defence mechanisms have been stimulated by antigens passive immunity immunity due to the acquisition of antibodies from another organism in which active immunity has been stimulated, including via the placenta, colostrum, or by injection of antibodies

immunization (e.g. inoculation/vaccination) the injection of a specific antigen, derived from a pathogen, to confer immunity against a disease

immunoglobin proteins synthesized by the B lymphocytes of the immune system

immunology study of the immune system

immunosuppressant a substance causing temporary suppression of the immune response

implantation embedding of the blastocyst (developed from the fertilized ovum) in the uterus wall

imprinting process occurring soon after birth, causing young birds to follow their mother

impulse see action potential

in situ in the original place (in the body or organism)
in vitro biological processes occurring in cell extracts
(literally 'in glass')

in vivo biological process occurring in a living organism (literally 'in life')

inbreeding when gametes of closely related individuals fuse leading to progeny that is homozygous for some or many alleles

incubation period period between infection by a causative agent and the appearance of the symptoms of a disease

incus tiny, anvil-shaped bone, the middle ossicle of the middle ear in mammals

industrial melanism increasing proportion of a darkened (melanic) form of an organism, in place of the light-coloured form, associated with industrial pollution by soot

infectious disease disease capable of being transmitted from one organism to another

inhibitor (enzyme) a substance which slows or blocks enzyme action (a competitive inhibitor binds to the active site; a non-competitive inhibitor binds to another part of the enzyme)

inhibitory synapse synapse at which arrival of an impulse blocks forward transmissions of impulses in the post-synaptic membrane

innate behaviour behaviour that does not need to be learned

innervation nerve supply

inspiratory capacity amount of air that can be drawn into the lungs

intelligence the ability to learn by reasoning and to solve problems not yet experienced

interferon proteins formed by vertebrate cells in response to virus infections

intermediates metabolites formed as components of a metabolic pathway

interphase the period between nuclear divisions when the nucleus controls and directs the activity of the cell

interspecific competition competition between organisms of different species

intestine the gut

intracellular enzymes enzymes operating inside the cell intraspecific competition competition between organisms of the same species

intron a non-coding nucleotide sequence of the DNA of chromosomes, present in eukaryotic chromosomes

invagination the intucking of a surface or wall

ion charged particle formed by the transfer of electron(s) from one atom to another

ionic bonding strong electrostatic attraction between oppositely charged ions

iris circular disc of tissue, in front of the lens of the eye, containing circular and radial muscles

irreversible inhibition inhibition by inhibitors that bind tightly and permanently to an enzyme, destroying its catalytic properties

islets of Langerhans groups of endocrine cells scattered through the pancreas

isomers chemical compounds of the same chemical formula but different structural formulae

isotonic being of the same osmotic concentration and therefore of the same water potential

isotopes different forms of an element, chemically identical but with slightly different physical properties, based on differences in atomic mass (due to different numbers of neutrons in the nucleus)

J

joule the SI unit of energy

K

karyogram the chromosomes of an organism in homologous pairs of decreasing length

karyotype the number and type of chromosomes present in an organism

keratin a fibrous protein found in horn, hair, nails and the upper layer of skin

keystone species species that have a key role in an ecosystem

kinesis random movements maintained by motile organisms until more favourable conditions are reached

kinetic energy energy in movement

kingdom the largest and most inclusive group in taxonomy

Krebs cycle part of tissue respiration

П

label add labels to a diagram

lactation secretion of milk in mammary glands leaching washing out of soluble ions and nutrients by water drainage through soil

learnt behaviour in animals, behaviour that is consistently modified as a result of experiences

leucocyte white blood cell

lichens permanent, mutualistic associations between certain fungi and algae, forming organisms found encrusting walls, tree trunks and rocks

ligament strong fibrous cord or capsule of slightly elastic fibres, connecting movable bones

light-dependent step part of photosynthesis occurring in grana of the chloroplasts, in which water is split and ATP and NADPH₂ are regenerated

light-independent step part of photosynthesis occurring in the stroma of the chloroplasts and using the products of the light-dependent step to reduce carbon dioxide to carbohydrate

lignin complex chemical impregnating the cellulose of the walls of xylem vessels, fibres and tracheids, imparting great strength and rigidity

linkage group the genes carried on any one chromosome lipid diverse group of organic chemicals essential to living things, insoluble in water but soluble in organic solvents such as ether and alcohol (e.g. lipid of the plasma membrane)

lipoprotein a complex of lipid and protein of various types which are classified according to density (e.g. LDL, HDL)

list give a sequence of brief answers with no explanation

liver lobule polygonal block of liver cells, a functional unit within the liver structure

locus the particular position on homologous chromosomes of a gene

loop of Henle loop of mammalian kidney tubule, passing from cortex to medulla and back, important in the process of concentration of urine

lumen internal space of a tube (e.g. gut, artery) or sac-shaped structure

lymph fluid derived from plasma of blood, bathing all tissue spaces and draining back into the lymphatic system

lymph node tiny glands in the lymphatic system, part of the body's defences against disease

lymphatic system network of fine capillaries throughout the body of vertebrates, which drain lymph and return it to the blood circulation

lymphocyte type of white blood cell

lysis breakdown, typically of cells

lysosome membrane-bound vesicles, common in the cytoplasm, containing digestive enzymes

M

macromolecule very large organic molecule – relative molecular mass 10 000+ (e.g. protein, nucleic acid or polysaccharide)

macronutrients ions required in relatively large amounts by organisms

macrophage phagocytic cells of the immune system found throughout the body

Malpighian body glomerulus and renal capsule of mammalian nephron

mandibles the lower jaw of vertebrates; in arthropods paired, biting mouthparts

matrix ground substance of connective tissue, and the innermost part of a mitochondrion

measure obtain a value for a quantity

mechanoreceptors a sensory receptor sensitive to mechanical stimulus

meiosis nuclear division with daughter cells containing half the number of chromosomes of the parent cell melanic pigmented

menstrual cycle monthly cycle of ovulation and menstruation in human females

meristem plant tissue capable of giving rise to new cells and tissues

mesentery connective tissue holding body organs (e.g. gut) in position

mesophyll parenchyma cells containing chloroplasts mesosome an invagination of the plasma membrane of a bacterium

metabolic pathway sequence of enzyme-catalysed biochemical reactions in cells and tissues

metabolic water water released within the body by oxidation, typically of dietary lipids

metabolism integrated network of all the biochemical reactions of life

metabolite a chemical substance involved in metabolism metaphase stage in nuclear division (mitosis and meiosis) in which chromosomes become arranged at the equator of the spindle

metastasis spread of cancer from one organ to another within the body

methylation addition of a methyl group to a molecule by enzyme action

microarray a collection of microscopic DNA spots attached to a solid surface

microhabitat the environment immediately surrounding an organism, particularly applied to tiny organisms

micronutrient ions required in relatively small (trace)
amounts by organisms

microtubule tiny, hollow protein tube in cytoplasm (e.g. a component of the spindle)

microvillus one of many tiny infoldings of the plasma membrane, making up a brush border

middle lamella a layer of pectins between the walls of adjacent cells

mitochondrion (plural, mitochondria) organelle in eukaryotic cells, site of Krebs cycle and the electron-transport pathway mitosis nuclear division in which the daughter nuclei have the same number of chromosomes as the parent cell

mitral valve left atrioventricular valve

mode the most frequently occurring value in a distribution

monoclonal antibody antibody produced by a single clone of B lymphocytes; it consists of a population of identical antibody molecules

monocotyledon class of angiosperms having an embryo with a single cotyledon

monohybrid cross a cross (breeding experiment) involving one pair of contrasting characters exhibited by homozygous parents

monomer a molecule that chemically combines with other monomers to form a polymer

monosaccharide simple carbohydrate (all are reducing sugars) morphology form and structure of an organism

motile capable of moving about

motor area area of the brain where muscular activity is coordinated

motor end plate the point of termination of an axon in a voluntary muscle fibre

motor neuron nerve cell that carries impulses away from the central nervous system to an effector (e.g. muscle, gland)

mRNA single-stranded ribonucleic acid formed by the process of transcription of the genetic code in the nucleus, that then moves to ribosomes in the cytoplasm

MRSA a bacterial infection that is resistant to a number of widely used antibiotics

mucilage mixture of various polysaccharides that become slippery when wet

mucosa the inner lining of the gut

mucus a watery solution of glycoprotein with protective and lubrication functions

muscle spindle sensory receptor in muscle, responding to stretch stimuli

mutagen an agent that causes mutation

mutant organism with altered genetic material (abruptly altered by a mutation)

mutation a change in the amount or the chemical structure (i.e. base sequence) of DNA of a chromosome

mutualism a case of symbiosis in which both organisms benefit from the association

mycelium a mass or network of hyphae

mycology the study of fungi

mycorrhiza a mutualistic association between plant roots and fungi, with the mycelium restricted to the exterior of the root and its cells (ectotrophic), or involving a closer association between hyphae and root cell contents (endotrophic)

myelin sheath an insulating sheath of axons of nerve fibres, formed by the wrapping around of Schwann cells myelinated nerve fibre nerve fibre insulated by a lipid sheath formed from membranes of Schwann cells myocardial infarction heart attack myofibril contractile protein filament from which muscle is composed

myogenic originating in heart muscle cells themselves, as in generation of the basic heartbeat

N

natural classification organisms grouped by as many common features as possible, and therefore likely to reflect evolutionary relationships

nectary group of cells secreting nectar (dilute sugar solution) in a flower

nematocyst stinging cell of cnidarians (coelenterates) (e.g. *Hydra*)

Neolithic revolution the period of human development involving the first establishment of settled agriculture practices, and including the breeding and cultivation of crop plants and herd animals

nephron the functional unit of a vertebrate kidney **nerve** bundle of many nerve fibres (axons), connecting the central nervous system with parts of the body

nerve cord in non-vertebrates, a bundle of nerve fibres and/or nerve ganglia running along the length of the body

nervous system organized system of neurons which generate and conduct impulses

autonomic nervous system (ANS) the involuntary nervous system

central nervous system (CNS) in vertebrates, the brain and spinal cord

parasympathetic nervous system part of the involuntary nervous system, antagonistic in effect to the sympathetic nervous system

peripheral nervous system (PNS) in vertebrates, neurons that convey sensory information to the CNS, and neurons that convey impulses to muscles and glands (effector organs)

sympathetic nervous system part of the involuntary nervous system, antagonistic in effect to the parasympathetic nervous system

neuron nerve cell

neurotransmitter substance chemical released at the pre-synaptic membrane of an axon, on arrival of an action potential, which transmits the action potential across the synapse

neutrophil a type of white blood cell

niche both the habitat an organism occupies and the mode of nutrition employed

node of Ranvier junction in the myelin sheaths around a myelinated nerve fibre

noradrenaline (also called norepinephrine) neurotransmitter substance in the sympathetic nervous system

nuclear division first step in the division of a cell, when the contents of the nucleus are subdivided by mitosis or meiosis

nuclear membrane double membrane surrounding the eukaryotic nucleus

nuclear pores organized gaps in the nuclear membrane, exit points for mRNA

nucleic acid polynucleotide chain of one of two types, deoxyribonucleic acid (DNA) or ribonucleic acid (RNA) nucleolus compact region of nucleus where RNA is synthesized

nucleoside organic base (adenine, guanine, cytosine, thymine) combined with a pentose sugar (ribose or deoxyribose)

nucleosome a sequence of DNA wound around eight histone protein cores – a repeating unit of eukaryotic chromatin

nucleotide phosphate ester of a nucleoside – an organic base combined with pentose sugar and phosphate (P_i) **nucleus** largest organelle of eukaryotic cells; controls and

nutrient a chemical substance found in foods that is used in the human body – any substance used or required by an organism as food

nutrition the process by which an organism acquires the matter and energy it requires from its environment

0

obesity condition of being seriously over-weight (BMI of 30+)

olfactory relating to the sense of smell **omnivore** an animal that eats both plant and animal food

oncogene a cancer-initiating gene

directs the activity of the cell

oocyte a female sex cell in the process of a meiotic division to become an ovum

oogamy union of unlike gametes (e.g. large ovum and tiny sperm)

open reading frame (ORF) in molecular genetics – part of a reading frame that contains no 'stop' codons

opsonin type of antibody that attacks bacteria and viruses, facilitating their ingestion by phagocytic cells

order a group of related families

organ a part of an organism, consisting of a collection of tissues, having a definite form and structure, and performing one or more specialized functions

organelle a unit of cell substructure

organic compounds of carbon (except carbon dioxide and carbonates)

organism a living thing

osmolarity the osmotic concentration of a solution osmoreceptor sense cells or organ stimulated by changes in water potential

osmoregulation control of the water balance of the blood, tissue or cytoplasm of a living organism

osmosis diffusion of free water molecules from a region where they are more concentrated (low solute concentration) to a region where they are less concentrated (high solute concentration) across a partially permeable membrane

outline give a brief account or summary

ovarian cycle the monthly changes that occur to ovarian follicles leading to ovulation and the formation of a corpus luteum

ovarian follicle spherical structures found in the mammalian ovary, containing a developing ovum with liquid surrounded by numerous follicle cells, and from which a secondary oocyte is released at ovulation

ovary female reproductive organ in which the female gametes are formed

ovulation shedding of ova from the ovary **ovule** in the flowering plant flower, the structure in an ovary which, after fertilization, grows into the seed

ovum (plural, ova) a female gamete

oxygen dissociation curve a graph of % saturation (with oxygen) of hemoglobin against concentration of available oxygen

oxyntic cells cells in the gastric glands that secrete hydrochloric acid

P

pacemaker structure that is the origin of the myogenic heartbeat, known as the sinoatrial node

Pacinian corpuscles sensory receptors in joints pancreas an exocrine gland discharging pancreatic juice into the duodenum, combined with endocrine glands (islets of Langerhans)

parasite an organism that lives on or in another organism (its host) for most of its lifecycle, deriving nutrients from its host

parenchyma living cells, forming the greater part of cortex and pith in primary plant growth

partial pressure the pressure exerted by each component of a gas mixture, proportional to how much of the gas is present in the mixture; the partial pressure of oxygen in air is represented by the symbol pO_2 and is expressed in kilopascals (kPa)

pathogen an organism or virus that causes a disease pentadactyl having all four limbs (typically) terminating in five digits

pentose a 5-carbon monosaccharide sugar

peptide a chain of up to 20 amino acid residues, linked by peptide linkages

peptide linkage a covalent bonding of the amino group of one amino acid to the carboxyl group of another (with the loss of a molecule of water)

perception the mental interpretation of sense data (i.e. occurring in the brain)

pericardium a tough membrane surrounding and containing the heart

peristalsis wave of muscular contractions passing down the gut wall

pesticide a chemical that is used to kill pests**petal** modified leaf, often brightly coloured, found in flowers

phagocytic cells cells that ingest bacteria, etc. (e.g. certain leucocytes, *Amoeba*)

phenotype the characteristics or appearance (structural, biochemical, etc.) of an organism

pheromone volatile chemical signal released into the air phloem tissue that conducts elaborated food in plant stems phosphate (P_i) phosphate ions, as involved in metabolism phospholipid formed from a triacylglycerol in which one of the fatty acid groups is replaced by an ionized phosphate group

photoautotroph an organism that uses light energy to generate ATP and to produce organic compounds from inorganic substances

photoheterotroph an organism that uses light energy to generate ATP and obtains organic compounds from other organisms

photomorphogenesis effects on plant growth of light photoperiodism day-length control of flowering in plants photophosphorylation the formation of ATP, using light energy (in the light-dependent step of photosynthesis in the grana)

photosynthesis the production of sugar from carbon dioxide and water, occurring in chloroplasts and using light energy, and producing oxygen as a waste product phototropism a tropic response of plants to light phylogenetic classification a classification based on evolutionary relationships (rather than on appearances) phylum a group of organisms constructed on a similar general plan, usually thought to be evolutionarily related physiology the study of the functioning of organisms phytoplankton photosynthetic plankton, including unicellular algae and cyanobacteria

pinocytosis uptake of a droplet of liquid into a cell involving invagination of the plasma membrane pituitary gland the master endocrine gland, attached to the underside of the brain

placenta maternal and fetal tissue in the wall of the uterus, site of all exchanges of metabolites and waste products between fetal and maternal blood systems

plankton very small, aquatic (marine or fresh water) plants and animals, many of them unicellular, that live at or near the water's surface

plant growth substance substances produced by plants in relatively small amounts, that interact to control growth and development

plasma the liquid part of blood

plasma membrane the membrane of lipid and protein that forms the surface of cells (constructed as a fluid mosaic membrane)

plasmid small circular DNA that is independent of the chromosome in bacteria (R plasmids contain genes for resistance to antibiotics)

plasmolysis withdrawal of water from a plant cell by osmosis (incipient plasmolysis is established when about 50% of cells show some shrinkage of cytoplasm away from the walls)

plastid an organelle containing pigments (e.g. chloroplast)

platelets tiny cell fragments that lack a nucleus, found in the blood and involved in the blood clotting mechanism pleural membrane lines lungs and thorax cavity and contains the pleural fluid

pneumocyte epithelial cell type lining the air spaces of
 the lungs

polarize the setting up of an electrical potential difference across a membrane

polarized light light in which rays vibrate in one plane only
pollen microspore produced in anthers (and male cones),
 containing male gamete(s)

pollen tube grows out of a pollen grain attached to a stigma, and down through the style tissue to the embryo sac

polygenic inheritance inheritance of phenotypic characters (such as height, eye colour in humans) that are determined by the collective effects of several different genes

polymer large organic molecules made up of repeating subunits (monomers)

polymerase chain reaction a technology in molecular biology used to amplify a single or very few pieces of DNA, generating many thousands of copies

polynucleotide a long, unbranched chain of nucleotides, as found in DNA and RNA

polypeptide a chain of amino acid residues linked by peptide linkages

polyploidy having more than two sets of chromosomes per cell

polysaccharides very high molecular mass carbohydrates, formed by condensation of vast numbers of monosaccharide units, with the removal of water

polysome an aggregation of ribosomes along a molecule of mRNA strand

population a group of organisms of the same species which live in the same area (habitat) at the same time

portal vein vein beginning and ending in a capillary network (rather than at the heart)

post-synaptic neuron neuron 'downstream' of a synapse potential difference separation of electrical charge within or across a structure (e.g. a membrane)

potential energy stored energy

predator an organism that catches and kills other animals to eat

predict give an expected result

pre-synaptic membrane membrane of the tip of an axon at the point of the synapse

pre-synaptic neuron neuron 'upstream' of a synapse
prey-predator relationship the inter-relationship of
 population sizes due to predation of one species
 (the predator) on another (the prey)

probe a defined, labelled fragment of DNA or RNA used to identify corresponding sequences in nucleic acids
 proboscis a projection from the head, used for feeding
 producer an autotrophic organism

productivity the amount of biomass fixed by producers
 (photosynthetically)

gross productivity total amount of organic matter produced

net productivity the organic matter of organisms less the amount needed to fuel respiration

prokaryote tiny unicellular organism without a true nucleus; they have a ring of RNA or DNA as a chromosome (e.g. bacteria and cyanobacteria)

promoter region a region of DNA that initiates transcription of a particular gene

prophase first stage in nuclear division, mitotic or meiotic **proprioceptor** an internal sensory receptor

prosthetic group a non-protein substance, bound to a protein as part of an enzyme, often forming part of the active site, and able to bind to other proteins

protein a long sequence of amino acid residues combined together (primary structure), and taking up a particular shape (secondary and tertiary structure)

proteome the entire set of proteins expressed by a genome **Protoctista** kingdom of the eukaryotes consisting of single-celled organisms and multicellular organisms related to them (e.g. protozoa and algae)

protoplast the living contents of a plant cell, contained by the cell wall

protozoan a single-celled animal-like organism, belonging to a sub-kingdom, the Protozoa, of the kingdom Protoctista

pseudopodium a temporary extension of the body of an amoeboid cell, by which movement or feeding may occur pulmonary circulation the circulation to the lungs in vertebrates having a double circulation

pulmonary ventilation rate breathing rate pulse a wave of increased pressure in the arterial circulation, generated by the heartbeat

pumps proteins in plasma membranes that use energy directly to carry substances across (primary pump) or work indirectly from metabolic energy (secondary pump) pupil central aperture in the eye through which light enters

pure breeding homozygous, at least for the gene(s)
 specified

Purkinje fibres fibres of the bundle of His that conduct impulses between the atria and ventricles of the heart pyloric sphincter circular muscle at the opening of the stomach to the duodenum

pyruvic acid a 3-carbon organic acid, CH₃.CO.COOH; product of glycolysis

Q

quadrat a sampling area enclosed within a frame

radical a short-lived, intermediate product of a reaction, formed when a covalent bond breaks, with one of the two bonding electrons going to each atom

radioactive dating using the proportions of different isotopes in fossilized biological material to estimate when the original organism was alive

- reaction centres protein—pigment complexes in the grana of chloroplasts, sites of the photochemical reactions of photosynthesis
- receptor a cell which responds to stimuli
- recessive allele an allele that has an effect on the phenotype only when present in the homozygous state
- reciprocal cross a cross between the same pair of genotypes in which the sources of the gametes (male and female) are reversed
- **recombinant** a chromosome (or cell or organism) in which the genetic information has been rearranged
- recombinant DNA DNA which has been artificially changed, involving joining together genes from different sources, typically from different species
- recycling of nutrients the process by which materials from dead organisms are broken down and made available for re-use in the biosphere
- redox reaction reaction in which reduction and oxidation happen simultaneously
- **reductive division** meiosis, in which the chromosome number of a diploid cell is halved
- reflex a rapid unconscious response
- reflex action a response automatically elicited by a stimulus
- reflex arc a functional unit in the nervous system, consisting of sensory receptor, sensory neuron, (possibly relay neurons), motor neuron and effector (e.g. muscle or gland)
- refractory period the period after excitation of a neuron, when a repetition of the stimulus fails to induce the same response, divided into periods known as absolute and relative
- relative atomic mass the ratio of the mass of an atom of an element to the mass of a carbon atom
- renal capsule the cup-shaped closed end of a nephron which, with the glomerulus, constitutes a Malpighian body
- renewable energy energy that comes from exploiting wave power, wind power, tidal power, solar energy, hydroelectric power or biological sources such as biomass
- **replication** duplication of DNA by making a copy of an existing molecule
 - semi-conservative replication each strand of an existing DNA double helix acts as the template for the synthesis of a new strand
- **reproduction** formation of new individual by sexual or asexual means
- **respiration** the cellular process by which sugars and other substances are broken down to release chemical energy for other cellular processes
- respiratory centre region of the medulla of the brain concerned with the involuntary control of breathing
- **respiratory pigment** substance such as hemoglobin, which associates with oxygen

- **respiratory quotient** ratio of the volume of carbon dioxide produced to the oxygen used in respiration
- **respiratory surface** a surface adapted for gaseous exchange
- **respirometer** apparatus for the measurement of respiratory gaseous exchange
- **response** the outcome when a stimulus is detected by a receptor
- resting potential the potential difference across the membrane of a neuron when it is not being stimulated (repolarized)
- restriction enzymes enzymes, also known as endonucleases, that cut lengths of nucleic acid at specific sequences of bases
- retina the light-sensitive layer at the back of the eye retroviruses viruses which, on arrival in a host cell, have their own RNA copied into DNA which then attaches to the host DNA for a period
- ribonucleic acid (RNA) a form of nucleic acid containing the pentose sugar ribose, found in nucleus and cytoplasm of eukaryotic cells (and commonly the only nucleic acid of prokaryotes), and containing the organic bases adenine, guanine, uracil and cytosine
- **ribosome** non-membranous organelle, site of protein synthesis
- **ribulose bisphosphate (RuBisCo)** the 5-carbon acceptor molecule for carbon dioxide, in the light-independent step of photosynthesis
- rod cell one of two types of light-sensitive cell in the retina, responsible for non-colour vision
- roughage indigestible matter (such as cellulose fibres) in our diet

S

- saliva secretion produced by salivary glands saltatory conduction impulse conduction 'in jumps', between nodes of Ranvier
- saprotroph organism that feeds on dead organic matter (saprotrophic nutrition)
- **sarcolemma** membranous sheath around a muscle fibre **sarcomere** a unit of a skeletal (voluntary) muscle fibre, between two Z-discs
- sarcoplasm cytoplasm around the myofibril of a muscle fibre sarcoplasmic reticulum network of membranes around the myofibrils of a muscle fibre
- **saturated fat** fat with a fully hydrogenated carbon backbone (i.e. no double bonds present)
- **Schwann cell** cell which forms the sheath around nerve fibres
- sclera the opaque, fibrous coat of the eyeball
- secondary sexual characteristic sexual characteristic that develops under the influence of sex hormones (androgens and estrogens)
- **secondary succession** a plant succession on soil already formed, from which the community had been abruptly removed

- secretion material produced and released from glandular cells
- **sedentary** organism living attached to the substratum (e.g. rock or other surface)
- **seed** formed from a fertilized ovule, containing an embryonic plant and food store
- segmentation body plan built on a repeating series of similar segments (e.g. as in annelids)
- **selection** differential survivability or reproductive potential of different organisms of a breeding population
- **self-pollination** transfer of pollen from the anther to the stigma of the same plant (normally the same flower)
- selfing self-pollination or self-fertilization
- **semilunar valve** half-moon shaped valves, preventing backflow in a tube (e.g. a vein)
- **seminiferous tubule** elongated tubes in the testes, the site of sperm production
- sense organ an organ of cells sensitive to external stimuli sensory area an area of the cerebral cortex of the brain receiving impulses from the sense organs of the body
- **sensory neuron** nerve cell carrying impulses from a sense organ or receptor to the central nervous system
- sensory receptor a cell specialized to respond to stimulation by the production of an action potential (impulse)
- **sepal** the protective outermost parts of a flower, usually green
- **seral stage/sere** stages in a seral succession, the whole succession being known as a sere
- **sex chromosome** a chromosome which determines sex rather than other body (soma) characteristics
- sex linkage genes carried on only one of the sex chromosomes and which therefore show a different pattern of inheritance in crosses where the male carries the gene from those where the female carries the gene
- **sexual reproduction** involves the production and fusion of gametes
- **shrub layer** the low-level (below trees) woody perennials growing in a forest or wood, normally most numerous in clearings (e.g. where a full-grown tree has died)
- sibling offspring of the same parent
- sieve tube a phloem element, accompanied by a companion cell, and having perforated end walls known as sieve plates
- simple sugar monosaccharide sugar such as a triose sugar (3C), pentose sugar (5C) or hexose sugar (6C)
- single access key contrasting or mutually exclusive characteristics are used to divide the group of organisms into progressively smaller groupings until individual organisms (species) can be identified
- **sinoatrial node** cells in the wall of the right atrium in which the heartbeat is initiated, also known as the pacemaker
- sinus a cavity or space

- **sketch** represent by means of a diagram or graph (labelled as appropriate). The sketch should give a general idea of the required shape or relationship, and should include relevant features
- **solar energy** electromagnetic radiation derived from the fusion of hydrogen atoms of the Sun, reaching Earth from space
- **somatic cell (soma)** body cell not a cell producing gametes (sex cell)
- specialization adaptation for a particular mode of life or function
- speciation the evolution of new species
- **species** a group of individuals of common ancestry that closely resemble each other and that are normally capable of interbreeding to produce fertile offspring
- spermatogonia male germ cells (stem cells) which make up the inner layer of the lining of the seminiferous tubules, and give rise to spermatocytes
- spermocyte cell formed in seminiferous tubules of testes; develops into sperm
- sperms motile male gametes of animals
- **spindle** structure formed from microtubules, associated with the movements of chromosomes in mitosis and mejosis
- spiracle hole in the side of an insect (thorax and abdomen) by which the tracheal respiratory system connects with the atmosphere
- **spiral vessel** protoxylem vessel with spirally arranged lignin thickening in lateral walls
- **spirometer** apparatus for measurements of lung capacity and breathing rates
- **spore** a small, usually unicellular reproductive structure from which a new organism arises
- **stamen** male reproductive organ of the flower, consisting of filament and anther, containing pollen sacs where pollen is formed and released
- **standing crop** the biomass of a particular area under study **state** give a specific name, value or other brief answer without explanation or calculation
- stem cell undifferentiated cell in embryo or adult that can undergo unlimited division and can give rise to one of many different cell types
- steroid organic molecule formed from a complex ring of carbon atoms, of which cholesterol is a typical example
- stigma part of the carpel receptive to pollen
- **stimulus** a change in the environment (internal or external) that is detected by a receptor and leads to a response
- **stoma** (plural, **stomata**) pore in the epidermis of a leaf, surrounded by two guard cells
- stretch receptor sensory receptor in muscles
- **stroke volume** volume of blood pumped out by the heart per minute
- **stroma** colourless fluid contents of the chloroplast, site of the light-independent reaction in photosynthesis

style found in the female part of the flower (carpel), linking stigma to ovary

substrate a molecule that is the starting point for a biochemical reaction and that forms a complex with a specific enzyme

subthreshold stimulus a stimulus not strong enough to trigger an action potential

succession the sequences of different communities developing in a given habitat over a period of time

sugars compounds of a general formula $C_x(H_2O)_y$, where x is approximately equal to y, and containing an aldehyde or a ketone group

suggest propose a solution, hypothesis or other possible answer

summation combined effect of many nerve impulses spatial summation many impulses arriving from different axons

temporal summation many impulses arriving via a single axon

surfactant compound that lowers the surface tension between liquids and a solid

suspensory ligament attaches lens to ciliary body in the vertebrate eye

symbiosis literally 'living together'; covering parasitism, commensalism and mutualism

symplast the pathway (e.g. of water) through the living contents of cells

synapse the connection between two nerve cells; functionally a tiny gap, the synaptic cleft, traversed by transmitter substances

synaptic knob the terminal swelling of a pre-synaptic neuron

synergism acting together and producing a larger effect than when acting separately

synovial fluid secreted by the synovial membrane at joints, having lubricating role

systematics the study of the diversity of living things systemic circulation the blood circulation to the body (not the pulmonary circulation)

systemic pesticide pesticide that is absorbed and carried throughout the body

systole contraction phases in the cardiac cycle

target organ organ on which a hormone acts (although broadcast to all organs)

taste bud sense organ found chiefly on the upper surface of the tongue

taxis response by a motile organism (or gamete) where the direction of the response is determined by the direction of the stimulus

taxon a classificatory grouping

taxonomy the science of classification

telophase a phase in nuclear division, when the daughter nuclei form

template (DNA) the DNA of the chromosome, copied to make mRNA

tendon fibrous connective tissue connecting a muscle to bone

terminal bud bud at the apex of the stem

test cross testing a suspected heterozygote by crossing it with a known homozygous recessive

testa seed coat

testis male reproductive gland, producing sperms

testosterone a steroid hormone, the main sex hormone of male mammals

thermogenesis generation of heat by metabolism

thorax in mammals, the upper part of the body separated from the abdomen; in insects, the region between head and abdomen

threshold of stimulation the level of stimulation required to trigger an action potential (impulse)

thrombosis blood clot formation, leading to blockage of a blood vessel

thylakoid membrane system of chloroplast

thyroid gland an endocrine gland found in the neck of vertebrates, site of production of thyroxin and other hormones influencing the rate of metabolism

tidal volume volume of air normally exchanged in breathing

tight junction point where plasma membranes of adjacent cells are sealed together

tissue collection of cells of similar structure and function **tissue fluid** the liquid bathing cells, formed from blood minus cells and plasma proteins

tonoplast membrane around the plant cell vacuole total lung capacity volume of air in the lungs after maximum inhalation

toxic poisonous

toxin poison

toxoid inactivated poison

trachea windpipe

tracheal system system of tubes by which air is passed to tissues in insects

tracheole branch of the trachea in insects

trait a tendency or characteristic

transcription when the DNA sequence of bases is converted into mRNA

transcription factor a protein that binds to specific DNA sequences to control the transcription of mRNA

transect arbitrary line through a habitat, selected to sample the community

transfer RNA (tRNA) short lengths of specific RNA that combine with specific amino acids prior to protein synthesis

translation the information of mRNA is decoded into protein (amino acid sequence)

translocation transport of elaborated food via the phloem

transmitter substances substances released into the synaptic cleft on arrival of an impulse at the pre-synaptic membrane to conduct the signal across the synapse

transpiration loss of water vapour from the aerial parts of plants (leaves and stem)

tricarboxylic acid (TCA) cycle the stage in tissue respiration in which pyruvate is broken down to carbon dioxide, and hydrogen is removed for subsequent oxidation

tricuspid valve right atrioventricular valve **triglyceride** fatty acid ester of the 3-carbon alcohol,
glycerol – forms into globules because of its hydrophobic
properties

triose a 3-carbon monosaccharide

tripeptide a peptide of three amino acid residues trophic level a level in a food chain defined by the method of obtaining food and in which all organisms are the same number of energy transfers away from the original source of the energy (photosynthesis)

tropism a growth response of plants in which the direction of growth is determined by the direction of the stimulus

tumour abnormal proliferation of cells, either benign (if self-limiting) or malignant (if invasive)

turgid having high internal pressure

U

ultrafiltration occurs through the tiny pores in the capillaries of the glomerulus

ultrastructure fine structure of cells, determined by electron microscopy

unisexual of one or other sex

unsaturated fat lipid with double bond(s) in the
hydrocarbon chain

urea NH₂CONH₂, formed from amino groups deaminated from excess amino acid

ureter tube from kidney to bladder

urethra tube from bladder to exterior

uric acid an insoluble purine, formed from the breakdown of nucleic acids and proteins

urine an excretory fluid produced by the kidneys, consisting largely of a dilute solution of urea

uterine cycle cycle of changes to the wall of the uterus (approximately 28 days)

uterus the organ in which the embryo develops in female mammals

V

vaccination conferring immunity from a disease by injecting an antigen (of attenuated microorganisms or inactivated component) so that the body acquires antibodies prior to potential infection

vacuole fluid-filled space in the cytoplasm, especially large and permanent in plant cells

vagus nerve 10th cranial nerve; supplies many internal organs, including the heart

variety a taxonomic group below the species level vasa recta capillary loop supplying the loop of Henle vascular bundle strands of xylem and phloem (often with fibres) separated by cambium; the site of water and elaborated food movements up and down the stem vascular tissue xylem and phloem of plants

vasoconstriction constriction of blood supply to capillaries (of skin)

vasodilation dilation of blood supply to capillaries (of skin)
 vector an organism that transmits a disease-causing organism, or a device for transferring genes during genetic engineering

vein vessel that returns blood to the heart

venous return volume of blood returning to the heart via the veins per minute

ventilation rate number of inhalations or exhalations per minute

ventral the underside

ventricle chamber, either of the centre of the brain, or of the heart

venule branch of a vein

vertebrate animal with a vertebral column

vesicle membrane-bound sac

vestibular apparatus the semicircular canals of the inner ear, concerned with balance

vestibular canal upper compartment of the cochlea vestigial small, imperfectly developed structure virus minute, intracellular parasite, formed of protein and

nucleic acid

vitalism theory early idea that organic compounds could

only be produced in living cells

vitreous humour clear jelly of inner eye

W

water table level of ground water in the Earth wax complex form of lipid

weathering breakdown of rock

white matter nerve fibres wrapped in their myelin sheaths

.

xeromorphic modified to withstand drought
xerophyte plant showing modifications to withstand drought
xerosere succession of plants starting from dry terrain
xylem water-conducting vessels of plants

Υ

yolk food stores of egg cells, rich in proteins and lipids yolk sac membranous sac with numerous blood vessels, developed by vertebrate embryos around the yolk (e.g. in birds and reptiles) or as a component of the placenta (in mammals)

Ζ

zonation naturally occurring distribution of organisms in zones

zygote product of the fusion of gameteszymogenic cells cells of gastric glands, secreting pepsinogen
